

PROFESSIONAL SUMMARY

Motivated Computer Science Engineering student aspiring to build a strong career in the technology domain by continuously enhancing technical skills, gaining real-world experience, and contributing effectively to innovative projects and organizational growth.

EDUCATION

Sreenidhi University B.Tech. - Computer Science & Engineering CGPA: 8.34 / 10	2024 - 2028
Narayana Junior college 12 th Percentage: 91.50 / 100	2024
Surya Oxford High School 10 th SSC CGPA: 9.70 / 10	2022

INTERNSHIPS

Social Internship Government Primary School Completed a 48-hour social internship at a Government Primary School from July 10 to July 25 as part of the academic curriculum. Actively participated in educational and community service activities, supporting teachers in classroom management and student engagement. Contributed to organizing basic learning sessions and assisting students in their studies. Developed strong communication, teamwork, and interpersonal skills through interaction with students and staff. Gained valuable insight into social responsibility and community needs. Demonstrated dedication and a positive attitude throughout the internship. Successfully completed the internship with satisfactory performance, enhancing both personal and professional growth.	10 Jul, 2025 - 25 Jul, 2025

PROJECTS

Dynamic Web Page Flow as Customer Behavior Currently developing an academic research project titled "Dynamic Web Page Flow as Customer Behavior" at Sreenidhi University. The project focuses on analyzing real-time user navigation to understand customer behavior on websites. Developing a dynamic model using session tracking, clickstream analytics, and interaction data. Identifying the limitations of static website models and proposing a behavior-driven approach. Applying process mining, Markov chain analysis, and machine learning techniques for analysis. Exploring user journeys to identify patterns, drop-offs, and conversion bottlenecks. Generating insights to improve user experience, personalization, and website performance. Collaborating with team members under faculty guidance. Strengthening analytical, technical, and problem-solving skills through ongoing work.
Time Table Generator The Time Table Generator is a software system designed to automatically create schedules for schools or colleges. It helps organize subjects, teachers, classrooms, and time slots efficiently. The system reduces the time and effort required to prepare timetables manually. It also avoids scheduling conflicts and ensures proper allocation of resources. This project makes timetable management easier and more accurate.
