PROJECTS

Slingshot

Developed an interactive "Gemini Slingshot" game using Google AI Studio, integrating AI capabilities to enhance gameplay and user interaction. Designed and implemented game mechanics involving slingshot-based controls, focusing on accuracy, physics-based movement, and engaging user experience. Leveraged AI features to improve responsiveness and create dynamic elements within the game. Demonstrated skills in creative problem-solving, basic game development, and effective use of AI tools to build an interactive application.

Smart Ambulance Booking HTML, CSS, JavaScript, Firebase

Smart Ambulance Booking HTML, CSS, JavaScript, Firebase

- Developed a web-based system enabling users to book ambulances in emergencies.
- Integrated Firebase for real-time request handling and driver notifications.
- Implemented a traffic alert mechanism that informs local police to clear routes for ambulances, reducing response time.

Student Task Manager — Full-Stack App

Academic Project

- ▣Developed a full-stack task management app with a JavaScript frontend and Node.js/Express backend, supporting CRUD operations via RESTful APIs.
- ▣Implemented JWT-based authentication and authorization, securing user data for 50+ test accounts during demo phase.

CRM Dashboard — Sales & Client Management Portal

Academic Project

- ▣Developed a CRM web application with Flask and SQLite, featuring client tracking, follow-up reminders, deal-stage pipelines, and performance reporting for a simulated 50-client dataset.
- ▣Built interactive data visualisation charts (Chart.js) for revenue trends, lead conversion, and activity logs; exported summary reports as Excel and PDF using openpyxl and ReportLab.
- ▣Implemented session-based authentication with role-differentiated views (Admin / Sales Rep), securing sensitive client data from unauthorised access.
