

TUMMALA DAVE AASHISTH

B.Tech. - Artificial Intelligence and Machine Learning

Ph: +91-9121373940

Email: 24011cseai0102@aiml.suh.edu.in

Hyderabad, Telangana, India - 500092

PROFESSIONAL SUMMARY

Computer Science (AI/ML) student focused on building scalable, data driven systems and distributed application workflows. Developed an end to end platform integrating React, FastAPI, and machine learning models to ingest, process, and analyze real time geospatial and image data. Experienced in designing backend services, REST APIs, and asynchronous data pipelines, with exposure to cloud storage, real time databases, and event driven architectures.

Brings hands on experience in business operations and supply chain execution, with a strong focus on optimizing workflows, improving efficiency, and making data informed decisions. Combines analytical thinking with structured problem solving, strong ownership, and adaptability. Seeking to contribute to large scale data platforms and engineering systems in production environments.

KEY EXPERTISE

Creative Writing Cinematography Mathematics Critical Thinking Supply Chain Artificial Intelligence ReactJS
Python

EDUCATION

Sreenidhi University

2024 - 2028

B.Tech. - Artificial Intelligence and Machine Learning | CGPA: 7.90 / 10

PAGE Junior College, Hyderabad

2023

12th | TSBIE | CGPA: 7.70 / 10

St.Andrews School

2021

10th | CBSE | CGPA: 8.20 / 10

INTERSHIPS

Nehru Zoological Park | NGO / Social Services

08 Jul, 2025 - 17 Jul, 2025

Community Education Intern/Volunteer

Key Skills:

Creativity Classroom Management Problem Solving Facilitation Public Speaking Communication Skills
Collaboration Teamwork Teaching

Assisted in educating young learners about wildlife habitats, conservation of flora and fauna, and sustainability practices. Managed basic ticketing and helped introduce digital literacy methods to improve efficiency and save time.

Designed and conducted engaging, play-based learning activities suitable for early learners, and contributed to organizing sustainability-focused sessions. Created low-cost teaching aids using easily available resources.

Developed strong communication, teamwork, and classroom management skills while gaining insight into grassroots educational challenges. Collaborated with community and women-led initiatives to promote meaningful social impact through education.

PROJECTS

Pawk

Team Size: 1

Pawk — Street Dog Tracking & Recognition Platform

Built a full stack web application to map and identify street dogs, enabling communities to track sightings, monitor patterns, and support animal welfare initiatives.

Developed an interactive map interface using React and Google Maps API for real time geospatial visualization.

Built a FastAPI backend with a deep learning model (MobileNetV2) to detect dogs from uploaded images with confidence scoring.

Implemented image embedding based recognition to identify repeat sightings of the same street dog across locations.

Integrated Firebase Firestore for real time data syncing and Cloudinary for scalable image storage.

Designed a heatmap visualization to highlight high density street dog zones for data driven insights.

Engineered an end to end system combining AI, geospatial data, and cloud services to address a real-world urban challenge.

POSITIONS OF RESPONSIBILITY

Community Education Intern

Assisted in educating young learners about wildlife habitats, conservation of flora and fauna, and sustainability practices. Managed basic ticketing and helped introduce digital literacy methods to improve efficiency and save time. Designed and conducted engaging, play-based learning activities suitable for early learners, and contributed to organizing sustainability-focused sessions. Created low-cost teaching aids using easily available resources. Developed strong communication, teamwork, and classroom management skills while gaining insight into grassroots educational challenges. Collaborated with community and women-led initiatives to promote meaningful social impact through education.

Data & Ingestion Lead

Led the end-to-end data pipeline for a voice-based artist recognition system by building and maintaining a high-quality audio feature database. Responsible for web scraping and sourcing solo vocal tracks for 100-150 artists using tools like yt-dlp, followed by vocal isolation using Demucs. Engineered an automated ingestion pipeline to segment clean vocal sections, extract 26-dimensional MFCC features (mean + standard deviation) using librosa, and store embeddings in ChromaDB. Ensured high data quality by filtering out noisy, instrumental-heavy, or non-solo segments, implementing validation checks, and handling failed or inconsistent scrapes. Documented dataset composition, including song selection rationale per artist, enabling transparency and reproducibility. Delivered a fully populated and query-ready vector database along with a scalable, repeatable ingestion script for continuous dataset expansion.

Outreach team(Head) - Student Placement Committee

Led outreach strategy and team operations to secure internships and placements by engaging with HRs and startup founders, managing recruiter pipelines, and coordinating end-to-end hiring processes.

Operations & Business Development Associate

Owned end-to-end operations across sourcing, production, inventory, and retail for a handcrafted apparel business, ensuring efficient workflow execution. Built a direct sourcing pipeline by establishing relationships with rural textile producers, reducing dependency on intermediaries and improving cost efficiency and quality control. Designed and optimized a producer-to-retailer sourcing model, achieving ~18% returns per cycle and contributing to ~53% overall revenue growth. Managed production workflows and coordinated a team of 5, implementing structured processes for cutting, stitching, and quality assurance. Analyzed sales patterns and demand trends to plan inventory and production batches, improving throughput and reducing waste.

SEMINARS / TRAININGS / WORKSHOPS

VeloDB x Lyzr AI x AI Circle Institute Name: Microsoft 12 Feb, 2026 - 21 Feb, 2026

Key Skills: Data Analytics Kafka AI APAC Apache DevOps

Attended a multi-session technical workshop focused on modern data systems, AI integration, and agent-based application development. Gained insights into the evolution of real-time analytics platforms through a session on Apache Doris 4.0, which highlighted its transition toward AI-native data intelligence and large-scale production use cases. Explored the role of AI in DevOps through discussions on intelligent automation and operational efficiency improvements. Participated in a hands-on workshop using Lyzr Architect to design and build agent-driven applications, learning practical approaches to orchestrating AI agents for real-world problem solving. The sessions collectively enhanced understanding of scalable data architectures, AI integration in engineering workflows, and modern full-stack application development practices.

Build-AI-thon 2025 21 Nov, 2025 - 21 Nov, 2025

Institute Name: Sreenidhi University

Key Skills: Application Problem Analysis Problem Solving Web Design Web Development

Participated in Build-AI-thon 2025, a fast-paced AI hackathon organized in collaboration with the Skill Development Center. Built a fully functional event management website from scratch using AI-assisted development tools such as ChatGPT and GitHub Copilot. The platform enabled users to create, manage, and explore events with an intuitive user interface and responsive design. Focused on rapid prototyping, efficient UI/UX design, and seamless functionality under time constraints. Leveraged AI tools to accelerate development, debug code, and optimize implementation, demonstrating the practical application of AI in modern web development workflows.

Evolve 2025 25 Jan, 2025 - 25 Jan, 2025

Institute Name: Microsoft

Key Skills: AI DevOps Data Analytics Networking Critical Thinking Cloud Data Structures

Attended Evolve 2025, a technology-focused event hosted at the Microsoft Office, centered on innovation, collaboration, and emerging trends in the tech industry.

Participated in expert-led sessions covering advancements in technology and real-world applications across domains. Engaged in a panel discussion on AI ethics and responsible innovation, gaining insights into the societal and professional implications of AI deployment.

Networked with industry professionals and peers, fostering connections and exchanging ideas on current technological challenges and opportunities. The event enhanced understanding of ethical AI practices, industry expectations, and the importance of collaborative problem-solving in modern tech ecosystems.
